PROFESSIONAL SUMMARY

I am an incoming final year Computer Engineering student, with some exposure to programming languages like Java, Basic Python, SQL, and DBMS. I have worked extensively on topics like Data Structures and Algorithms (DSA), Spring Boot, OpenCV, and REST APIs. In addition to this, I am familiar with basic cloud concepts.

EDUCATION

Pune Vidyarthi Griha's College of Engineering, Nashik **2023–2027**
B.E. in Computer Engineering – Aggregate CGPA: 7.48 / 10.0

Janta English School & Jr. College, Dindori **2023**
Higher Secondary Certificate (HSC)

Shree Sharadraoji Pawar Madhyamik Vidyalaya, Nigdol **2021**
Secondary School Certificate (SSC)

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL, HTML, CSS
Frameworks & Libraries: Spring Boot, React, OpenCV, Pcap4J
Databases: MySQL, PostgreSQL, MongoDB
Core Computer Science: Data Structures and Algorithms, Object-Oriented Programming, DBMS, Computer Networks
Networking & Cloud: Packet Capture and Analysis, REST APIs, AWS Cloud Fundamentals
Tools: Git, GitHub, IntelliJ IDEA, VS Code, Postman
Soft Skills: Problem Solving, Teamwork, Communication, Adaptability, Critical Thinking

PROJECTS

1. AgriVision – Farmer-Buyer Digital Marketplace
Web Application

- Designed a digital marketplace concept to connect farmers directly with buyers and reduce dependency on middlemen.
- Defined farmer listings for crop details, quantity, location, and expected price, alongside buyer requirement posts.
- Focused on improving communication, product discovery, and market accessibility through a digital agricultural platform.

2. NETGUARD AI – Cybersecurity & Network Monitoring Platform **Java, Pcap4J**

- Developed a Java-based network monitoring application using Pcap4J to capture and inspect network packets for traffic analysis.
- Analyzed packet headers and protocol information to understand network communication patterns and support troubleshooting.
- Applied computer networking and cybersecurity concepts to packet inspection, traffic monitoring, and network analysis.
- GitHub: `NETGUARD-AI-Cybersecurity-Platform`

3. Face Detection and Recognition System

- Developed a face detection and recognition system using Python and OpenCV for image processing and computer vision.
- Applied image-processing techniques to detect faces from images or camera input and support face identification.

INTERNSHIP EXPERIENCE

Software Development Intern **January 2026**
Nexonica Systems Pvt. Ltd.

- Developed a face detection and recognition system using Python and OpenCV for computer vision and image processing.
- Collaborated in an Agile development environment, contributing to sprint planning and iterative feature delivery.

CERTIFICATIONS & ACHIEVEMENTS

- Cloud Architecting – ICT Academy–Cognizant Training Program for Girls
- Java Training – Talent Battle
- C++ Training – Talent Battle
- Participated in SmartEarth Hackathon 2026
